DATA ANALYST INTERN – LEAD MANAGEMENT TASK									
Objective	Analyze the provided student-lead dataset and create a clear lead management and conversion report in Excel.								
	Data cleaning involved standardization of varied titles of courses to streams, verification of all 66 records having Indian state values populated, and leaving the counsellor and communication statuses unchanged. There are four dummy records which include "Test," "Softskillg," "Anonymous," and "Hdhubhd." Matching of the varying course titles will facilitate proper classification, whereas retaining the original lead status will retain audit trails.								
1. Data Cleaning	Standardize course names, complete the State / Country field, retain counsellor names, lead status and Chat/Call Status, and identify records needing review.								
2. Find Duplicates	Identify duplicate records using Student Name ONLY. Mark each record as Unique, Duplicate, or Review. Report the total duplicate records.								
3. Counsellor Analysis	Calculate total leads handled by each counsellor, state-wise lead counts, converted leads, conversion rate, and identify the best-performing counsellor.								
4. Chat / Call Analysis	Analyze Chat/Call Status categories such as Chat Started, Replied, No Reply, Call Connected, Call Not Connected, Follow-up Required, etc. Compare Chat/Call Status with Lead Status and identify leads requiring follow-up.								
5. Conversion Analysis	Calculate total leads, converted leads and overall conversion rate. Calculate conversion rate by counsellor, course and lead source.								
6. Course & State Analysis	Calculate course-wise and state-wise lead counts and conversions. Identify the Top 5 courses and Top 5 states by lead volume.
